Li G., Jin J., Tan X., Hu S., Yuan J., Qiang B.;
"Cloning and identification of human neurotrimin full length cDNA."
Submitted (FEB-199) to the EMBL/GenBank/DDBJ databases.
-i- FUNCTION: Neural cell adhesion molecule.
-i- SUBCELLULAR LOCATION: Attached to the membrane by a GPI-anchor.
-i- SIMILARITY: Belongs to the immunoglobulin superfamily. IgLON

                                                                                                                                                                                                                                                                                                                                                                                                                                                              Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               protein search, using sw model

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present amino acid sequence is the mouse lymphoid derived dendrtitic cell adhesion molecule, LDCAM. It is found on lymphoid derived dendrtitic cells and displays homology to adhesion molecules, B7-1 and cytoplasmic region of B7-II. Mouse LDCAM is found on whole embryo, testes, triple negative cells murine splenic and lymph node CD8+, S49.1 and dendritic cells. LDCAM polypeptides interacts with T cell surface molecules to alter signalling and inhibits T cell proliferation, bind to themselves and B7L-1, an LDCAM binding protein and increases natural killer (NX) cell populations. It may be used to measure the biological activity and as quality control reagents of LDCAM binding proteins. LDCAM may be used for treating disorders associated with malfunctioning of immune system, inflammation, autoimmune disorders, viral infected cells, infectious diseases and for killing tumour cells. They are also useful for prevention or reducing the effect of organ and bone marrow transplant crejection and for modulating T cell immune responses. LDCAM polypeptides cany also be used as carriers for delivering agents attached to T cells or cells bearing B7L-1

Isolated nucleic acid molecules encoding human secreted protein for the prevention, amelioration and treatment of autoimmune, inflammatory, hyperproliferative and cardiovascular disorders, wounds, and infectious diseases. proteins are used cancer,

Disclosure; Page 182-183; 803pp; English

The present invention relates to 12 secreted human proteins and the current control of the present invention relates to 12 secreted provide sequences given in AAA80606-A80623 encode the 12 secreted protein sequences given in CC AAA80606-A80623 encode the 12 secreted protein sequences given in CC dependent on the tissues in which they are expressed. Examples of the cactivities of the proteins include: immunosuppressant; anti-inflammatory; anti-arthritic; antirheumatic, dermatological; antiproliferative; antiarreriosclerotic; anticancer; vulnerary; antiviral; antibacterial; antiarreriosclerotic; anticancer; vulnerary; antiviral; antibacterial; antiagonists may be used to treat prevent and/or diagnose various disease, antagonists may be used to treat prevent and/or diagnose various disease, and sorders and conditions examples of which include: immune disorders e.g. Addison's disease, rheumatoid arthritis, dermatitis, and multiple colarosis; inflammatory disorders e.g. inflammatory bowel disease, coronary disorders e.g. inflammatory bowel disease, coronary coronary arteriosclerosis and myocarditis; cancer e.g. melanoma and lymphoma. The proteins and polymucleotide sequences may also be used in wound healing the proteins and coronary and coronary and coronary and coronary are disorders e.g. inflammatory bewel disorders e.g. coronary arteriosclerosis and myocarditis; cancer e.g. melanoma and polymphoma. The proteins and polymucleotide sequences may also be used in wound healing the following the proteins and polynucleotide sequences may also be used in wound heali and the treatment of infectious diseases. The human secreted protein #11 and protein sequences are represented in sequences AAA80616 and AAB25586. Sequences AAA80677-A80682 represent genes related to the protein gene#11
